SOFTWARE PACKAGES

L-Functions and Modular Forms Database.

- Added 39,293 quadratic lattices from various repositories to a centralized and searchable lattice database and wrote code in Sage and Magma to enable unique identification of lattices. Available at <http://www.lmfdb.org/Lattice/>

Sagemath computer algebra system

- Developed and wrote Python based functions for existing quadratic forms modules including evaluation of bilinear maps, rational isometry testing, and quadratic form invariants over number fields. Enhanced formatting with Sphinx/ReST markup, and added documentation to the existing module for quadratic forms. Participated in all stages of the development processes through sage-trac using git and mercurial. Available at <http://www.sagemath.org>
